

HOW DOES AGING AFFECT MEMORY?

The Department of Neurology at the University of Florida McKnight Brain Institute is currently seeking people between the ages of 62-90 years with or without memory problems in order to better understand the effects of aging on memory.

Participants will attend 6 visits during which they will complete brief tasks of attention and memory while their brain waves are recorded. Participants will be reimbursed \$50/visit for their time and travel expenses.

To participate or for more information, please contact
